Profile Summary

I started working right after I graduated, joining INSA (Information Network Security Administrator) as a web application security tester. I was part of the audit and evaluation division, where I focused on security testing for different applications. Over time, I began digging into database testing, open-source analysis, and mobile application testing. After five years of learning and growing, I became a supervisor, leading a team in the same division.

Later, I joined Kifiya Financial Technology as a Senior Quality Assurance Engineer. I became part of the Qena team for the Michu project. I also worked on Mastercard projects and device financing, and I am currently part of the security team.
